CARLOS ALAN JIMÉNEZ GUZMÁN

I am a software developer with over two years of experience, currently just a few months away from earning my degree in Computer Systems Engineering with a specialization in Software Development Technologies from the Instituto Tecnológico de Morelia. During this time, I worked at the "Fábrica Académica de Software," where I honed my front-end development skills, focusing on crafting modern, user-friendly interfaces that are both visually appealing and highly functional. Additionally, I significantly enhanced my backend development abilities, enabling me to build robust and efficient solutions that consistently meet and often surpass expectations.

EXPERIENCE

Languages: English B1, Spanish

INTERSHIP Intelisis DMS Automotriz

- The web development was done using CodeIgniter HTML 5, CSS, Javascript, PHP, Bootstrap, GitLab and Figma

AMIGO INTELISIS

OCTOBER 2024 - PRESENT

- What I did in this web application was redesign and implement the news section, creating a new database table and adding a reactions feature. For this task, I used Figma to design the interface, and after the design was approved, I proceeded to program it using CodeIgniter with PHP, JavaScript, HTML5, CSS, Bootstrap, and SQL Server.
- I also added various minor functionalities, such as creating new fields or tables in the database, and I fixed bugs. However, most of my work was focused on backend development.

ACADEMIC (FAS)

MyTEAPony Project Registered with INDAUTOR

May 2023 - July 2024

- Registration Number: 03-2024-091112412500-01
- I developed 80% of the MyTEAPony web application, a web application designed to support therapy for individuals with Autism Spectrum Disorder (ASD). I used technologies such as React.JS and MUI Material and consumed the REST API developed by my team using Django REST Framework
- I visited the CRIT Michoacán to communicate directly with therapists for requirements gathering, documented in an ERS document based on the IEEE Std 830-1998 standard
- I managed all phases of the software development process, following the Agile Kanban methodology using Trello
- I used GitHub for version control
- Testing was conducted at the CRIT Michoacán (Morelia) with the assistance of therapists.

SIGA App Development, Academic Project FAS ITM

January 2024 - June 2024

- I made minor code adjustments to improve system functionalities
- I used technologies such as Django REST, Python, PostgreSQL, Docker Desktop, CSS, Bootstrap, and HTML
- I conducted the analysis for a new system implementation.

Project Advisor for Lily Beauty Clinic FAS ITM

October 2023 - January 2024

- I planned and strategized for 4 development teams.
- Supported all 4 teams in requirements gathering and client communication.
- Advised the teams on the technologies to be used
- I utilized the Agile Scrum methodology, organizing sprints and weekly meetings to monitor team progress and provide support as needed.

Tu especialista

03 October 2023 - 07 October 2023

- I used React Native to develop key features of the application, including the login functionality.
- I implemented a search filter to help users easily find relevant information or services.
- I created a menu section to enhance navigation and user experience.
- I integrated the application with an API, ensuring seamless data consumption and interaction.

SKILLS

•Java •MySQL •FIGMA •Canva •Kotlin •CSS •MariaDB •Java •Node.js •Express.js •Postgre SQL •Microsoft Office •Powe BI
•Git Hub •React.js •Javascript •C# •Tailwind •Boostrap •React Native •Trello •Jira •Slack •Microsot Teams
•HTML 5 •Docker •Python •GitLab •TypeScript •Adobe XD •PHP •Angular •Spring Boot •Django •CodeIgniter
